treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidarug Resistance associated protein-6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane. Spanning helices grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a haritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal
                                                                                                                                                                                                                                                                                                                                              Human; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; Multidrug Resistence-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage;
                                                                         Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention relates to methods and compositions for diagnosing and

lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for changelling in view of the PXE status. The methods are useful for useful in the area of genetic testing, carrier detection and prenatal diaptosis. The present sequence is human APP-binding cassette (ABC) transporter. ABCG6 (MRP6) mutant cDNA. This mutant cDNA results in an amino acid change from Gly to Ser at position 131 of MRP6 protein, but it is incorrectly referred as Gly to Ile in page 49 of the specification. Note: The present sequence is not shown in the specification but is derived from human APP-binding cassetter ABCG6 (MRP6) cDNA (SED ID NO: 2] shown in page 130-137 of the specification (AAD16231).
                                                                                                                                                                                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                         120

And plotted in located in the prasma membrane contenting t, membrane spanning helices grouped into three transmambrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lesions with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated protein-6) gene locus on chromosome 16. ABCC6 (MRP6) gene encodes a 165 kDa protein located in the plasma membrane containing 17 membrane useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present sequence is human ATP-binding cassette (ABC) transporter. ABCC6 (MRP6) mutant cDMA. This mutant cDNA is obtained by the deletion of base T at position 3775 of wild-type MRP6 cDNA. Note: The present sequence is not shown in the specification but is derived from human ATP-binding cassette transporter ABCC6 (MRP6) cDNA [SED ID NO: 2] shown in page 130-137 of the specification (AAD16231). invention relates to methods and compositions for diagnosing and Example 2; Page -; 163pp; English.  $\overset{\text{N}}{\times} \overset{\text{N}}{\times} \overset{\text{O}}{\times} \overset{\text{O}}{\times$ 

Sequence 4511 BP; 835 A; 1380 C; 1354 G; 942 T; 0 other;

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the compounds or the progression of these toxic effects by determining the compounds or progression in tissues or cells exposed to the toxic colls. Also included are methods of predicting at least one toxic cells. Also included are methods of predicting at least one toxic ceffect of a compound or progression of a toxic effect, preferably the expension in a tissue or cell sample exposed to the compound of two or care genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression. Compare genes listed in the specification, where differential expression of the method can also be used to identify an agent which modulates the coxic response and predict cellular pathways that a compound modulates in a cell. The method sufflise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising at least two genes listed in the specification.

Compared to a set of the probes comprises a sequence of a set of genes comprising at least two genes listed in the specification. The method is useful for elucidating global chartifying the expression level in a tissue or cell of at least one gene listed in the specification. The method is useful for elucidating global charges in gene expression level in a tissue or cell of at least comprises or cell exposed to a known toxin. The genes may be used as toxicity markers in drug screening and toxicity assays. The genes and conservation of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity consider the present independent or compound or agent. Hepatotoxicity asserd and a used to compound or agent. Hepatotoxicity asserd and evenuence is an every consider or cell exposed to a compound or agen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    'n.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 CCTGCCGCCACCAGCCTGTGTGCTTCCTGAGAACAGCAGGGGTCTGGGTACCC 120

The invention relates to methods and compositions for diagnosing and treating Pseudoxanthoma elasticum (PXE) and PXE associated physiological dysfunctions. The invention is useful for screening for the presence of a PXE mutation. Mutations associated with PXE maps to the ATP-binding cassette transporter ABCC6 (MRP6-Multidrug Resistance associated consent of protein located in the plasma membrane containing 17 membrane. The protein located in the plasma membrane containing 17 membrane. The spanning helices grouped into three transmembrane domains. PXE is inherited as an autosomal recessive phenotype or appears as a sporadic phenotype. PXE is a heritable disorder characterised by mineralisation of elastic fibers in skin, arteries and the retina, that result in dermal lessons with associated laxity and loss of elasticity, arterial insufficiency, cardiovascular disease and retinal haemorrhages leading to macular degeneration. The method is useful for screening a population of individuals in order to identify individuals with one or more PXE associated MRP6 alleles who are then provided with appropriate genetic counselling in view of the PXE status. The methods are useful for identifying homozygotes, compound heterozygotes or carriers and thus are useful in the area of genetic testing, carrier detection and prenatal diagnosis. The present cDNA sequence encodes mouse APP-binding cassette (ABC) transporter, ABCC6 (MRP6) protein belonging to sub-family "C". Since ABCC6 protein is involved in drug-resistance it is also called
                                                                                                 Mouse; prenatal diagnosis; dermal lesion; cardiovascular disease; MRP6; Multidrug Resistance-associated protein 6; macular degeneration; ABCC6; ATP-binding cassette transporter; arterial insufficiency; chromosome 16; Pseudoxanthoma elasticum; PXE; heritable disorder; retinal haemorrhage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Screening presence of Pseudoxanthoma elasticum mutation useful for identifying homozygotes, compound heterozygotes or carriers involves determining presence of mutation in MRP6 (ABCC6) nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4980 BP; 970 A; 1471 C; 1461 G; 1078 T; 0 other;

The present sequence is that of human ATP binding cassette
subfamily C protein ABCC1 cDNA. The cDNA was identified using a
differential display method in which monocytes from peripheral
blood were subjected to macrophage differentiation and cholesterol
coding with acetylated low density lipoproteins and subsequent
deloading with high density lipoprotein (HDL3) to identify
cholesterol sensitive genes. The gene maps to chromosome 16q13.12
and is also termed MRP1 (multidrug resistance associated protein).
The invention provides cholesterol-sensitive ABC genes (see
AA294734-63). These genes, and polypeptides encoded by them,
can be used for diagnostic and therapeutic applications, and for
biochemical or cell-based assays to screen for pharmacologically
cative modulator compounds useful for the treatment of lipid
disorders, atherosclerosis or other inflammatory diseases such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Adenosine triphosphate binding proteins useful for identifying agents for treating atherosclerosis and other inflammatory disorders \cdot

```

cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated bolynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various

The present invention relates to methods of detecting a prostate

organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for

useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer-associated polynucleotide

sednences

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mus musculus mRNA for multidrug resistance-associated protein 6 (MRP6); complete cds

MRP6; complete cds

MRP7; complete cds

MRP7; complete cds

MRP8; Superial on the same (1999)

Morikawa, A.; Suzuki, H., Hirohashi, T. and Sugiyama, Y.

Direct Submission

Morikawa, A.; Suzuki, H., Hirohashi, T. and Sugiyama, Y.
